SUMMARY

- Full Stack AI Developer with 4+ years of experience building scalable **AI-powered applications and backend systems** using **Python, FastAPI, and React.js**.
- Experienced in **GenAI, LLM integrations, and RAG pipelines**, developing intelligent and production-ready AI solutions.
- Hands-on experience with **AWS and Datadog** for cloud deployment, application monitoring, observability, and performance analysis.
- Strong expertise in developing **REST APIs, microservices, and cloud-native applications** using modern software development practices.
- Proven ability to build **scalable, secure, and high-performance production systems**.

EXPERIENCE

Software Engineer 2 (Prutech Solutions)

John Deere India Pvt. Ltd.

Mar 2026 – Present

- Developing an enterprise **Aftermarket Content Studio** application from scratch for **Lead TIS and Authoring users**, enabling creation and management of tractor repair, sales, and service manuals for authoring in **Windchill**.
- Designed and developed backend services using **FastAPI** with a layered architecture comprising **BFF (Backend for Frontend) and Domain Service layers**, using **PostgreSQL** as the primary database.
- Developed and integrated multiple **REST APIs** for user creation, user registration, comments, attachments, and other application workflows, and consumed these services in the **React.js** frontend.
- Implemented frontend state management using **Redux**, integrating backend APIs and managing application state to support efficient and responsive user workflows.
- Implemented **Amazon S3** integration for secure attachment storage and retrieval, supporting document and content management workflows within the application.
- Used **GitHub** for source code management and collaborative development, following enterprise development practices and **John Deere UI/UX and theming standards** across the application.

Digital Specialist Engineer

Infosys

Aug 2022 – Feb 2026

- Designed and deployed backend services for a **Metaverse platform** using **Django, MongoDB, and AWS**, implementing secure authentication and **SSO integration with Keycloak** for seamless user access across applications.
- Developed scalable backend systems for a **forecasting platform** for a leading **US telecom client**, building **ETL pipelines** to process network incident and telemetry data used for **ML-based forecasting** and analytics.
- Integrated **LLM APIs** using a **RAG (Retrieval-Augmented Generation) pipeline** to enable intelligent querying and contextual insights from telecom operational data.
- Built **FastAPI microservices** with **Kafka-based event streaming**, along with automated **email notification triggers** and monitoring integrations to improve alerting, observability, and incident response.

Software Development Intern

Edyst

Jul 2020 – Jul 2022

- Developed **Python/Java challenges** and **Flask backends**, using **Bitbucket, CMS, and CDN**.

PROJECTS

Clinic Management (COVID-19)

[GitHub](#)

Built a patient room allocation and monitoring system with live COVID-19 data via **REST APIs**, enabling real-time filtering and visualization, deployed on **AWS**.

EDUCATION

2018 – 2022

Bachelor of Technology (B.Tech), Computer Science and Engineering
Walchand Institute of Technology, India

CGPA: 9.63

SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, SQL

Frameworks & Libraries: FastAPI, Django, React.js, Redux, LangChain

AI & GenAI: Generative AI, LLM APIs, RAG (Retrieval-Augmented Generation), AI Integration

Backend & Architecture: REST APIs, Microservices, BFF (Backend for Frontend), Domain Services, ETL Pipelines, Event-Driven Architecture

Databases: PostgreSQL, MySQL, MongoDB, BigQuery, PL/SQL, NoSQL

Cloud & DevOps: AWS, Amazon S3, GCP, Docker, CI/CD, GitHub, Git, Bitbucket, Linux

Messaging, Monitoring & Tools: Apache Kafka, Datadog, Keycloak, Postman, Jira, CMS, CDN
